

Assessment Test: Software Tester (QA)

Full Name: Bhanu Tyagi

Email ID: ibhanutyagi@gmail.com

Contact Number: 8755797120

Approach

I have kept the test cases simple and based on the features given in the assessment. I would first check the normal flow and then try invalid and boundary inputs.

Test Case Design

Registration

Area	ID	Test case / scenario	Type	Expected result
Registration	REG-01	Register with valid name, email and password	Positive	Account should be created successfully.
Registration	REG-02	Leave name blank and submit	Negative	A required-field message should be shown.
Registration	REG-03	Leave email blank and submit	Negative	A required-field message should be shown.
Registration	REG-04	Enter invalid email format (abc@)	Negative	The user should be asked to enter a valid email.
Registration	REG-05	Enter a password shorter than the allowed length	Edge/Negative	Registration should not continue and validation should appear.
Registration	REG-06	Register using an already registered email	Negative	The user should see an email-already-exists message.
Registration	REG-07	Enter spaces in required fields	Edge	The form should not accept

	only	spaces as valid input.
--	------	------------------------

Login

Area	ID	Test case / scenario	Type	Expected result
Login	LOG-01	Login with correct email and password	Positive	User should be logged in and taken to the task list/home page.
Login	LOG-02	Login with wrong password	Negative	Login should fail with a clear error message.
Login	LOG-03	Login with unregistered email	Negative	Login should fail with a suitable message.
Login	LOG-04	Leave email or password blank	Negative	Required-field validation should be shown.
Login	LOG-05	Enter email with extra spaces	Edge	Spaces should be handled properly; valid credentials should not fail because of accidental spaces.

Task CRUD Operations

Area	ID	Test case / scenario	Type	Expected result
Task Create	TASK-01	Create a task with valid title/details	Positive	Task should be created and displayed in the task list.
Task Create	TASK-02	Create a task with title left blank	Negative	Task should not be created and validation should appear.
Task Create	TASK-03	Create a task with very long title/details	Edge	Application should handle the input safely

				and show a limit message if applicable.
Task Create	TASK-04	Create two tasks with the same title	Edge	Application should handle both tasks correctly without overwriting one.
Task View	TASK-05	Open the task list after creating a task	Positive	Created task should be visible with correct details.
Task View	TASK-06	Refresh the task list/page	Positive	Saved tasks should still be displayed.
Task View	TASK-07	Open task list when there are no tasks	Edge	A proper empty-state message should be displayed.
Task Edit	TASK-08	Edit an existing task with valid data	Positive	Updated task details should be saved and displayed.
Task Edit	TASK-09	Edit a task and remove its title	Negative	Update should be blocked and validation should appear.
Task Edit	TASK-10	Edit a task and save without making changes	Edge	Application should handle it without creating duplicate data.
Task Delete	TASK-11	Delete an existing task	Positive	Task should be removed from the list.
Task Delete	TASK-12	Cancel delete if a confirmation is shown	Negative/Edge	Task should remain in the list.

Input Validation & Error Handling

Area	ID	Test case / scenario	Type	Expected result
Validation/Error	VAL-01	Submit forms with multiple	Negative	Relevant validation

		required fields blank		messages should be shown.
Validation/Error	VAL-02	Enter special characters in task title	Edge	Application should accept safe characters or show a clear validation message.
Validation/Error	VAL-03	Use the app when the database/save operation fails	Negative	A user-friendly error should be shown and the app should not show false saved data.
Validation/Error	VAL-04	Use an expired/invalid session while editing or deleting	Negative	User should be asked to log in again or access should be denied.

Potential Bugs / Risk Areas

These are possible issues I would look for without executing the application.

ID	Bug description	Severity	Reason / Impact
BUG-01	Duplicate registration may be allowed with the same email.	Major	It can create duplicate accounts and cause login/account confusion.
BUG-02	Login may accept incorrect password or fail to block invalid credentials.	Critical	Unauthorized access could happen.
BUG-03	Task can be created with an empty title.	Major	Blank tasks make the task list difficult to use.
BUG-04	Edited task changes may not be saved to the database.	Major	User may lose changes after refresh.
BUG-05	Deleting one task may delete the wrong task.	Critical	Important user data could be lost.

BUG-06	Deleted task may appear again after page refresh.	Major	This can mean the delete operation was not saved correctly.
BUG-07	Very long input may break the task form or page layout.	Minor	It can affect usability and may cause unexpected application behavior.
BUG-08	Task list may show another user's tasks.	Critical	This is a serious privacy and data-access issue.
BUG-09	Database/save failure may still show a success message.	Major	User may believe work was saved when it was not.
BUG-10	User may access task pages after logout using the browser back button.	Major	Logged-out users should not be able to access protected data.

Note

This is my basic QA approach. I would also report any actual bug with clear steps to reproduce, expected result, actual result, severity, and screenshots if available.
